Part I The Basics

1	Our A	Adversary: The Circuit	3				
	1.1	Boolean Functions	3				
	1.2	Circuits	12				
	1.3	Branching Programs					
	1.4	Almost All Functions are Complex	21				
		1.4.1 Circuits	22				
		1.4.2 Approximation Complexity	26				
		1.4.3 The Circuit Hierarchy Theorem	29				
		1.4.4 Switching Networks and Formulas	30				
		1.4.5 Invariant Classes	33				
	1.5	So Where are the Complex Functions?	36				
		1.5.1 On Explicitness	36				
		1.5.2 Explicit Lower Bounds	37				
	1.6	A 3n Lower Bound for Circuits	38				
	1.7	Graph Complexity	40				
		1.7.1 Clique Complexity of Graphs	41				
		1.7.2 Star Complexity of Graphs	42				
	1.8	A Constant Factor Away From $P \neq NP$?	45				
	Exerc	ises	48				
2	Analy	ysis of Boolean Functions	55				
	2.1	Boolean Functions as Polynomials	55				
	2.2	Real Degree of Boolean Functions	56				
	2.3	The Fourier Transform	59				
	2.4	Boolean 0/1 Versus Fourier ±1 Representation	62				
	2.5	Approximating the Values 0 and 1	63				
	2.6	Approximation by Low-Degree Polynomials	64				
	2.7	Sign-Approximation					
	2.8	Sensitivity and Influences	68				
	Exerc	ises	76

Part II Communication Complexity

3	Game	s on Relations	81
	3.1	Communication Protocols and Rectangles	81
	3.2	Protocols and Tiling	84
	3.3	Games and Circuit Depth	88
		3.3.1 Monotone Depth	90
	Exerci	ses	91
4	Game	s on 0-1 Matrices	93
	4.1	Deterministic Communication	93
	4.2	Nondeterministic Communication	96
		4.2.1 Greedy Bounds	98
		4.2.2 Fooling-Set Bounds	99
	4.3	$P = NP \cap co-NP$ for Fixed-Partition Games	101
	4.4	Clique vs. Independent Set Game	104
	4.5	Communication and Rank	106
	4.6	The Log-Rank Conjecture	107
		4.6.1 Known Gaps	108
		4.6.2 Small Rank Implies Large Discrepancy	110
		4.6.3 Rank and Chromatic Number	112
	4.7	Communication with Restricted Advice	114
	4.8	$P \neq NP \cap co-NP$ for Best-Partition Games	116
	4.9	Randomized Communication	119
		4.9.1 Distributional Complexity	119
	4.10	Lower Bound for the Disjointness Function	121
	4.11	Unbounded Error Communication and Sign-Rank	124
	4.12	Private vs. Public Randomness	128
	Exerci	ses	130
5	Multi-	Party Games	135
	5.1	The "Number-in-Hand" Model	136
	5.2	The Approximate Set Packing Problem	137
	5.3	Application: Streaming Algorithms	139
	5.4	The "Number-on-Forehead" Model	140
	5.5	The Discrepancy Bound	143
	5.6	Generalized Inner Product	146
	5.7	Matrix Multiplication	148
	5.8	Best-Partition k-Party Communication	150
	Exerci	ses	153

Part III Circuit Complexity

6	Formulas		
	6.1	Size Versus Depth	159
	6.2	A Quadratic Lower Bound for Universal Functions	164

	6.3	The Effect of Random Restrictions	167
	6.4	A Cubic Lower Bound	170
	6.5	Nechiporuk's Theorem	172
	6.6	Lower Bounds for Symmetric Functions	174
	6.7	Formulas and Rectangles	176
	6.8	Khrapchenko's Theorem	179
	6.9	Complexity is not Convex	182
	6.10	Complexity is not Submodular	187
	6.11	The Drag-Along Principle	189
	6.12	Bounds Based on Graph Measures	190
	6.13	Lower Bounds via Graph Entropy	193
	6.14	Formula Size, Rank and Affine Dimension	196
		6.14.1 Affine Dimension and Formulas	197
		6.14.2 Projective Dimension and Branching Programs	199
	Exercis	ses	200
_			005
7		tone Formulas	205
	7.1	The Rank Argument	205
	7.2	Lower Bounds for Quadratic Functions	206
	7.3	A Super-Polynomial Size Lower Bound	209
		7.3.1 Rank of Disjointness Matrices	210
		7.3.2 A Lower Bound for Paley Functions	211
	7.4	A $\log^2 n$ Depth Lower Bound for Connectivity	213
		7.4.1 Reduction to the Fork Game	214
		7.4.2 Lower Bound for the Fork Game	216
	7.5	An $n^{1/6}$ Depth Lower Bound for Clique Function	219
	7.6	An $n^{1/2}$ Depth Lower Bound for Matching	224
	Exercis	ses	227
8	Span H	Programs	229
Ū	8.1	The Model	229
	8.2	The Power of Span Programs	231
	8.3	Power of Monotone Span Programs	232
	8.4	Threshold Functions	233
	8.5	The Weakness of Monotone Span Programs	235
	8.6	Self-Avoiding Families	236
	8.7	Characterization of Span Program Size	238
	8.8	Monotone Span Programs and Secret Sharing	240
		ses	241
9	Monot	tone Circuits	245
	9.1	Large Cliques are Hard to Detect	245
		9.1.1 Construction of the Approximated Circuit	247
		9.1.2 Bounding Errors of Approximation	248
	9.2	Very Large Cliques are Easy to Detect	251
		9.2.1 Properties of τ -Critical Graphs	252
	9.3	The Monotone Switching Lemma	257

	9.4	The Lower-Bounds Criterion	259	
	9.5	Explicit Lower Bounds 2	261	
		9.5.1 Detecting Triangles 2	261	
		9.5.2 Graphs of Polynomials 2	262	
	9.6	Circuits with Real-Valued Gates	263	
	9.7 Criterion for Graph Properties			
	9.8	Clique-Like Problems	269	
	9.9	What About Circuits with NOT Gates?	273	
	9.10	Razborov's Method of Approximations 2	274	
		9.10.1 Construction of Legitimate Lattices 2	275	
	9.11	A Lower Bound for Perfect Matching 2	276	
		9.11.1 Error-Probability on Accepted Inputs 2	278	
		9.11.2 Error-Probability on Rejected Inputs 2	279	
	Exercis	ses 2	282	
10	The M	stery of Negations 2	285	
	10.1		285	
		10.1.1 Slice Functions	286	
		10.1.2 Negated Inputs as New Variables	288	
	10.2	Markov's Theorem	289	
	10.3	Formulas Require Exponentially More NOT Gates	293	
	10.4	Fischer's Theorem	295	
	10.5	How Many Negations are Enough to Prove $P \neq NP$?	297	
	Exercis		299	

Part IV Bounded Depth Circuits

11	Depth-3 Circuits		
	11.1	Why is Depth 3 Interesting?	303
	11.2	An Easy Lower Bound for Parity	306
	11.3	The Method of Finite Limits	306
	11.4	A Lower Bound for Majority	309
	11.5	$NP \neq co-NP$ for Depth-3 Circuits	310
	11.6	Graph Theoretic Lower Bounds	313
	11.7	Depth-2 Circuits and Ramsey Graphs	315
	11.8	Depth-3 Circuits and Signum Rank	317
	11.9	Depth-3 Circuits with Parity Gates	321
	11.10	Threshold Circuits	326
		11.10.1 General Threshold Circuits	327
		11.10.2 Threshold Circuits of Depth Two	329
		11.10.3 Threshold Circuits of Depth Three	333
	Exercia	ses	336
12	Large	Depth Circuits	339
	12.1	Håstad's Switching Lemma	339
	12.2	Razborov's Proof of the Switching Lemma	341

	12.3	Parity and Majority Are Not in AC ⁰	343
		12.3.1 Majority of AC ⁰ Circuits	348
		12.3.2 Parity is Even Hard to Approximate	349
	12.4	Constant-Depth Circuits and Average Sensitivity	350
	12.5	Circuits with Parity Gates	354
	12.6	Circuits with Modular Gates	357
	12.7	Circuits with Symmetric Gates	363
	12.8	Rigid Matrices Require Large Circuits	365
	Exerci	ses	369
13	Circui	ts with Arbitrary Gates	371
	13.1	Entropy and the Number of Wires	372
	13.2	Entropy and Depth-Two Circuits	374
	13.3	Matrix Product Is Hard in Depth Two	376
		13.3.1 Restricted Matrix Product Is Easy in Depth Three	377
	13.4	Larger-Depth Circuits	378
	13.5	Linear Circuits for Linear Operators	382
	13.6	Circuits with OR Gates: Rectifier Networks	386
		13.6.1 Circuits with OR and AND Gates	388
		13.6.2 Asymptotic Bounds	390
	13.7	Non-linear Circuits for Linear Operators	391
	13.8	Relation to Circuits of Logarithmic Depth	394
	Exercis	ses	399

Part V Branching Programs

14	Decision Trees			405
	14.1	14.1 Adversary Arguments		405
	14.2	P = NP	∩ co-NP for Decision Tree Depth	407
	14.3	Certifica	tes, Sensitivity and Block Sensitivity	409
		14.3.1	Block Sensitivity Versus Certificate Complexity	412
		14.3.2	Block Sensitivity Versus Depth	412
		14.3.3	Sensitivity and Degree of Polynomials	414
	14.4	Sensitivi	ty and Subgraphs of the <i>n</i> -Cube	416
	14.5	Evasive	Boolean Functions	418
	14.6	Decision	Trees for Search Problems	421
	14.7	Linear D	Decision Trees	424
	14.8	Element	Distinctness and Turán's Theorem	425
	14.9	$P \neq NP$	\cap co-NP for Decision Tree Size	427
		14.9.1	Spectral Lower Bound	430
		14.9.2	Explicit Lower Bounds	432
	Exerci	ses	-	435
15	General Branching Programs		439	
	15.1 Nechiporuk's Lower Bounds		ruk's Lower Bounds	439
		15.1.1	Lower Bounds for Symmetric Functions	441

	15.2	Branching Programs Over Large Domains	442
	15.3	Counting Versus Nondeterminism	445
	15.4	A Surprise: Barrington's Theorem	447
	15.5	Oblivious Branching Programs	451
	Exerci	ses	454
16	Bound	led Replication	457
	16.1	Read-Once Programs: No Replications	458
	16.2	$P \neq NP \cap co-NP$ for Read-Once Programs	460
	16.3	Branching Programs Without Null-Paths	461
	16.4	Parity Branching Programs	465
	16.5	Linear Codes Require Large Replication	467
	16.6	Expanders Require Almost Maximal Replication	470
		16.6.1 Quadratic Functions of Expanders are Hard	474
	Exerci	ses	477
17	Round	led Time	479
	17.1	The Rectangle Lemma	480
	17.1	A Lower Bound for Code Functions	481
