### Preface XIII

<b>1</b>	<b>Review of probability concepts</b>	<b>1</b>
1.1	Random Variables	1
1.2	Average Values, Moments	6
1.3	Some Important Probability Distributions with a Given Name	6
1.3.1	Bernoulli Distribution	6
1.3.2	Binomial Distribution	7
1.3.3	Geometric Distribution	8
1.3.4	Uniform Distribution	8
1.3.5	Poisson Distribution	10
1.3.6	Exponential Distribution	11
1.3.7	Gaussian Distribution	12
1.3.8	Gamma Distribution	13
1.3.9	Chi and Chi-Square Distributions	14
1.4	Successions of Random Variables	16
1.5	Jointly Gaussian Random Variables	18
1.6	Interpretation of the Variance: Statistical Errors	20
1.7	Sums of Random Variables	22
1.8	Conditional Probabilities	23
1.9	Markov Chains	26
	Further Reading and References	28
	Exercises	29
<b>2</b>	<b>Monte Carlo Integration</b>	<b>31</b>
2.1	Hit and Miss	31
2.2	Uniform Sampling	34
2.3	General Sampling Methods	36
2.4	Generation of Nonuniform Random Numbers: Basic Concepts	37
2.5	Importance Sampling	50
2.6	Advantages of Monte Carlo Integration	56
2.7	Monte Carlo Importance Sampling for Sums	57
2.8	Efficiency of an Integration Method	60

2.9	Final Remarks 61
	Further Reading and References 62
	Exercises 62
3	<b>Generation of Nonuniform Random Numbers: Noncorrelated Values 65</b>
3.1	General Method 65
3.2	Change of Variables 67
3.3	Combination of Variables 72
3.3.1	A Rejection Method 74
3.4	Multidimensional Distributions 76
3.5	Gaussian Distribution 81
3.6	Rejection Methods 84
	Further Reading and References 94
	Exercises 94
4	<b>Dynamical Methods 97</b>
4.1	Rejection with Repetition: a Simple Case 97
4.2	Statistical Errors 100
4.3	Dynamical Methods 103
4.4	Metropolis <i>et al.</i> Algorithm 107
4.4.1	Gaussian Distribution 108
4.4.2	Poisson Distribution 110
4.5	Multidimensional Distributions 112
4.6	Heat-Bath Method 116
4.7	Tuning the Algorithms 117
4.7.1	Parameter Tuning 117
4.7.2	How Often? 118
4.7.3	Thermalization 119
	Further Reading and References 121
	Exercises 121
5	<b>Applications to Statistical Mechanics 125</b>
5.1	Introduction 125
5.2	Average Acceptance Probability 129
5.3	Interacting Particles 130
5.4	Ising Model 134
5.4.1	Metropolis Algorithm 137
5.4.2	Kawasaki Interpretation of the Ising Model 143
5.4.3	Heat-Bath Algorithm 146
5.5	Heisenberg Model 148
5.6	Lattice $\Phi^4$ Model 149
5.6.1	Monte Carlo Methods 152
5.7	Data Analysis: Problems around the Critical Region 155
5.7.1	Finite-Size Effects 157

5.7.2	Increase of Fluctuations	160
5.7.3	Critical Slowing Down	161
5.7.4	Thermalization	163
	Further Reading and References	163
	Exercises	163
<b>6</b>	<b>Introduction to Stochastic Processes</b>	<b>167</b>
6.1	Brownian Motion	167
6.2	Stochastic Processes	170
6.3	Stochastic Differential Equations	172
6.4	White Noise	174
6.5	Stochastic Integrals. Itô and Stratonovich Interpretations	177
6.6	The Ornstein–Uhlenbeck Process	180
6.6.1	Colored Noise	181
6.7	The Fokker–Planck Equation	181
6.7.1	Stationary Solution	185
	Further Reading and References	186
	Exercises	187
<b>7</b>	<b>Numerical Simulation of Stochastic Differential Equations</b>	<b>191</b>
7.1	Numerical Integration of Stochastic Differential Equations with Gaussian White Noise	192
7.1.1	Integration Error	197
7.2	The Ornstein–Uhlenbeck Process: Exact Generation of Trajectories	201
7.3	Numerical Integration of Stochastic Differential Equations with Ornstein–Uhlenbeck Noise	202
7.3.1	Exact Generation of the Process $g_h(t)$	205
7.4	Runge–Kutta-Type Methods	208
7.5	Numerical Integration of Stochastic Differential Equations with Several Variables	212
7.6	Rare Events: The Linear Equation with Linear Multiplicative Noise	217
7.7	First Passage Time Problems	221
7.8	Higher Order (?) Methods	225
7.8.1	Heun Method	226
7.8.2	Midpoint Runge–Kutta	228
7.8.3	Predictor–Corrector	228
7.8.4	Higher Order?	230
	Further Reading and References	230
	Exercises	231
<b>8</b>	<b>Introduction to Master Equations</b>	<b>235</b>
8.1	A Two-State System with Constant Rates	235
8.1.1	The Particle Point of View	236

8.1.2	The Occupation Numbers Point of View	239
8.2	The General Case	242
8.3	Examples	244
8.3.1	Radioactive Decay	244
8.3.2	Birth (from a Reservoir) and Death Process	245
8.3.3	A Chemical Reaction	246
8.3.4	Self-Annihilation	248
8.3.5	The Prey–Predator Lotka–Volterra Model	249
8.4	The Generating Function Method for Solving Master Equations	251
8.5	The Mean-Field Theory	254
8.6	The Fokker–Planck Equation	256
	Further Reading and References	257
	Exercises	257
<b>9</b>	<b>Numerical Simulations of Master Equations</b>	<b>261</b>
9.1	The First Reaction Method	261
9.2	The Residence Time Algorithm	268
	Further Reading and References	273
	Exercises	273
<b>10</b>	<b>Hybrid Monte Carlo</b>	<b>275</b>
10.1	Molecular Dynamics	275
10.2	Hybrid Steps	279
10.3	Tuning of Parameters	281
10.4	Relation to Langevin Dynamics	283
10.5	Generalized Hybrid Monte Carlo	284
	Further Reading and References	285
	Exercises	286
<b>11</b>	<b>Stochastic Partial Differential Equations</b>	<b>287</b>
11.1	Stochastic Partial Differential Equations	288
11.1.1	Kardar-Parisi-Zhang Equation	288
11.2	Coarse Graining	289
11.3	Finite Difference Methods for Stochastic Differential Equations	291
11.4	Time Discretization: von Neumann Stability Analysis	293
11.5	Pseudospectral Algorithms for Deterministic Partial Differential Equations	300
11.5.1	Evaluation of the Nonlinear Term	303
11.5.2	Storage of the Fourier Modes	304
11.5.3	Exact Integration of the Linear Terms	305
11.5.4	Change of Variables	306
11.5.5	Heun Method	306
11.5.6	Midpoint Runge–Kutta Method	307
11.5.7	Predictor–Corrector	308
11.5.8	Fourth-Order Runge–Kutta	310

11.6	Pseudospectral Algorithms for Stochastic Differential Equations	311
11.6.1	Heun Method	314
11.6.2	Predictor–Corrector	315
11.7	Errors in the Pseudospectral Methods	316
	Further Reading and References	321
	Exercises	321
<b>A</b>	<b>Generation of Uniform <math>\hat{U}(0, 1)</math> Random Numbers</b>	327
A.1	Pseudorandom Numbers	327
A.2	Congruential Generators	329
A.3	A Theorem by Marsaglia	332
A.4	Feedback Shift Register Generators	333
A.5	RCARRY and Lagged Fibonacci Generators	334
A.6	Final Advice	335
	Exercises	335
<b>B</b>	<b>Generation of <math>n</math>-Dimensional Correlated Gaussian Variables</b>	337
B.1	The Gaussian Free Model	338
B.2	Translational Invariance	340
	Exercises	344
<b>C</b>	<b>Calculation of the Correlation Function of a Series</b>	347
	Exercises	350
<b>D</b>	<b>Collective Algorithms for Spin Systems</b>	351
<b>E</b>	<b>Histogram Extrapolation</b>	357
<b>F</b>	<b>Multicanonical Simulations</b>	361
<b>G</b>	<b>Discrete Fourier Transform</b>	367
G.1	Relation Between the Fourier Series and the Discrete Fourier Transform	367
G.2	Evaluation of Spatial Derivatives	373
G.3	The Fast Fourier Transform	373
	Further Reading	375
	<b>References</b>	377
	<b>Index</b>	383
