Abstract	iii
Kurzfassung	v
1 Introduction	1
1.1 From Active Networking to Future Internet Research . .	2
1.2 Flexible Network Architectures	4
1.3 Contributions	7
1.4 Scope	8
1.5 Thesis Structure	9
I Flexible Network Architectures	11
2 The Autonomic Network Architecture	13
2.1 Node Architecture	13
2.2 Protocol Stack Setup	15
2.3 Node Local Protocol Stack Adaptation	18
2.4 Inter Node Protocol Stack Adaptation	20
3 The Dynamic Protocol Stack Architecture	23
3.1 Node Architecture	23
3.2 Protocol Setup	25
3.3 Node Local Protocol Stack Adaptation	33
3.4 Inter Node Protocol Stack Adaptation	34

4	Comparison of ANA and the DPS Architecture	37
5	Section Conclusion	41
II	Execution Environments for Dynamic Protocol Stacks	43
6	Packet Processing Execution Environments	45
7	DPS on a General-Purpose Processor	49
7.1	Architecture	49
7.2	Performance Evaluation	56
8	DPS with Hardware Accelerators	59
8.1	EmbedNet Architecture	60
8.2	EmbedNet Hardware Design	66
8.3	Performance Evaluation	73
9	Section Conclusion	81
III	Case Studies with Dynamic Adaptaion	83
10	Autonomic Adaptation of the Protocol Stack Functionality	85
11	Autonomic HW/SW Mapping in EmbedNet	91
11.1	Mapping Algorithms	93
11.2	Network Traffic Mixes	94
11.3	Experimental Results	94
12	Section Conclusion	101
IV	Towards Self-Awareness in Networking	103
13	Adaptation Strategies	105

14 Self-Awareness in Networking	109
14.1 Proprioceptive Framework	109
14.2 Levels of Self-Awareness	111
15 Section Conclusion	115
 V Conclusions	 117
16 Comparison with Related Work	119
16.1 Future Internet Architectures	119
16.2 Network Processing with FPGAs	122
17 Review of Contributions	129
18 Critical Assessment	135
19 Future Work and Outlook	139
Abbreviations	163
Acknowledgements	167
Curriculum Vitae	171
