Preface *XIII*

List of Contributors *XV*

1	Nanostructured Activated Carbons for Supercapacitors <i>1</i>
	<i>Wentian Gu, Xinran Wang, and Gleb Yushin</i>
1.1	Supercapacitors <i>1</i>
1.2	Activated Carbon as Electrode for Supercapacitors <i>3</i>
1.3	Synthesis of ACs <i>4</i>
1.3.1	Precursors <i>4</i>
1.3.2	Activation Method <i>11</i>
1.3.2.1	Physical Activation <i>11</i>
1.3.2.2	Chemical Activation <i>11</i>
1.3.2.3	Electrochemical Activation <i>13</i>
1.4	Various Forms of ACs as Supercapacitor Electrodes <i>13</i>
1.4.1	Activated Carbon Powders <i>13</i>
1.4.2	Activated Carbon Films and Monoliths <i>14</i>
1.4.3	Activated Carbon Fibers <i>15</i>
1.5	Key Factors Determining the Electrochemical Performance of AC-Based Supercapacitors <i>16</i>
1.5.1	Pore Size and Pore Size Distribution <i>16</i>
1.5.2	Pore Alignment <i>19</i>
1.5.3	Surface Functionalization <i>20</i>
1.5.4	Electrical Conductivity of the Electrode <i>21</i>
1.5.5	Electrolyte Selection <i>22</i>
1.5.6	Understandings of Ion Adsorption in Porous Structure <i>23</i>
1.5.7	Quantum Capacitance of Carbon and Doping <i>26</i>
1.6	Self-discharge of ACs-Based Supercapacitors <i>27</i>
1.7	Summary <i>28</i>
	References <i>29</i>
2	Nanocarbon Hybrids with Silicon, Sulfur, or Paper/Textile for High-Energy Lithium Ion Batteries <i>35</i>
	<i>Nian Liu, Guangyuan Zheng, and Yi Cui</i>

2.1	Introduction	35
2.2	Nanocarbon/Silicon Hybrid Anodes	36
2.2.1	Nanocarbon@Silicon Structure	37
2.2.2	Silicon@Nanocarbon Structure	38
2.2.3	Silicon@Void@Nanocarbon Structure	40
2.2.4	Nanocarbon/Silicon Hierarchical Structure	41
2.3	Nanocarbon/Sulfur Hybrid Cathodes	42
2.3.1	0D Nanocarbon (Nanoporous Carbon)	44
2.3.2	1D Nanocarbon (Carbon Nanotubes and Nanofibers)	46
2.3.3	2D Nanocarbon (Graphene Oxide and Reduced Graphene Oxide)	47
2.3.4	3D Nanostructured Carbon	48
2.4	Nanocarbon/Paper/Textile Hybrids as Conductive Substrates	49
2.4.1	Carbon Nanotubes/Paper/Textile Hybrids	49
2.4.2	Graphene/Textile Hybrids	51
2.5	Conclusion and Perspective	52
	References	52
3	Precursor-Controlled Synthesis of Nanocarbons for Lithium Ion Batteries	59
	<i>Shuling Shen, Xianglong Li, and Linjie Zhi</i>	
3.1	Introduction	59
3.2	Precursor-Controlled Synthesis of Nanocarbons	60
3.3	Nanocarbons in LIBs	63
3.3.1	Pure Nanocarbons as Anode in LIBs	63
3.3.2	Nanocarbon Composites as Anode in LIBs	67
3.3.2.1	Silicon-Nanocarbon Composites	67
3.3.2.2	Tin-Nanocarbon Composites	70
3.3.2.3	Metal Oxide-Nanocarbon Composites	75
3.3.3	Nanocarbon in Cathode of LIBs	78
3.4	Summary and Outlook	79
	References	80
4	Nanocarbon/Metal Oxide Hybrids for Lithium Ion Batteries	87
	<i>Jiaping Wang, Li Sun, Yang Wu, Mengya Li, Kaili Jiang, and Shoushan Fan</i>	
4.1	Metal Oxides (MOs) for Lithium Ion Batteries	87
4.2	Carbon Nanocoating/MO Hybrids for LIBs	89
4.2.1	Manganese Oxides/Carbon Coating Hybrids	89
4.2.2	Iron Oxides/Carbon Coating Hybrids	91
4.2.3	Tin Oxides/Carbon Coating Hybrids	92
4.2.4	Other MOs/Carbon Coating Hybrids	92
4.3	CNFs/MO Hybrids and CNTs/MO Hybrids	93
4.3.1	CNFs/MO Hybrids	95
4.3.2	CNTs/MO Hybrids	96
4.4	Graphene/MO Hybrids	98

4.4.1	Cobalt Oxides/Graphene Hybrids	101
4.4.2	Iron Oxides/Graphene Hybrids	101
4.4.3	Manganese Oxides/Graphene Hybrids	103
4.4.4	Tin Oxides/Graphene Hybrids	104
4.4.5	Other MOs/Graphene Hybrids	105
4.5	Hierarchical Nanocarbon/MO Hybrids	106
4.5.1	Carbon Nanocoating/CNTs/MO Hybrids	106
4.5.2	Carbon Nanocoating/Graphene/MO Hybrids	107
4.5.3	CNFs/CNTs/Graphene/MO Hybrids	108
4.6	Summary and Perspectives	110
	Acknowledgments	111
	References	111
5	Graphene for Flexible Lithium-Ion Batteries: Development and Prospects	119
	<i>Lei Wen, Feng Li, Hong-Ze Luo, and Hui-Ming Cheng</i>	
5.1	Introduction	119
5.1.1	Development of Flexible Electronic Devices	119
5.1.2	Principle of LIBs	122
5.1.3	Current Status of Flexible LIBs	124
5.2	Types of Flexible LIBs	127
5.2.1	Definition of Flexible LIBs	127
5.2.2	Design and Fabrication of Bendable LIBs	128
5.2.3	Design and Fabrication of Stretchable LIBs	131
5.3	Current Status of Graphene-Based Electrodes for Bendable LIBs	136
5.3.1	Fabrication of Graphene	138
5.3.2	Graphene/Non-conductive Flexible Substrates	140
5.3.3	Graphene Films	143
5.3.4	Self-Standing Graphene Composites	146
5.3.5	Graphene Fibers	149
5.3.5.1	Wet-Spinning Process for Graphene Fibers	150
5.3.5.2	Wet-Spinning Process for Graphene Based Composite Fibers	152
5.4	Characterization of Graphene-Based Bendable Electrodes	155
5.4.1	Mechanical Properties of Flexible Electrodes	156
5.4.2	Mechanical Stability of Flexible Electrodes under Deformation	158
5.4.3	Static and Quasi-Dynamic Electrochemical Performance	159
5.4.4	Dynamic Electrochemical Performance	161
5.5	Prospects of Flexible LIBs	162
5.6	Summary and Perspective	169
	Acknowledgment	169
	References	169

6	Supercapatteries with Hybrids of Redox Active Polymers and Nanostructured Carbons 179
	<i>Anthony J. Stevenson, Denys G. Gromadskyi, Di Hu, Junghoon Chae, Li Guan, Linpo Yu, and George Z. Chen</i>
6.1	Introduction 179
6.2	Electrochemical Capacitance 180
6.3	Supercapattery 183
6.4	Carbon Nanotubes and Redox Active Polymers 185
6.5	Carbon Nanotube-Polymer Hybrids 188
6.5.1	Synthesis of CNT and RAPs Hybrids 188
6.5.2	Performance of CNT/RAP Hybrids 192
6.6	Electrode and Cell Fabrication 193
6.7	Electrolytes and Separator 196
6.7.1	Electrolytes 197
6.7.2	Separator 199
6.8	Recycling of Materials 199
6.9	Conclusion 203
	Abbreviations 204
	References 204
7	Carbon-Based Supercapacitors Produced by the Activation of Graphene 211
	<i>Ziqi Tan, Guanxiong Chen, and Yanwu Zhu</i>
7.1	Introduction 211
7.2	Supercapacitors Produced from activated graphene 215
7.2.1	Activated Graphene as Electrode Materials 215
7.2.2	Effects of Graphene Precursors before Activation 218
7.2.3	Optimization Based on Activated Graphene 220
7.3	Conclusion and Remarks 223
	Acknowledgments 223
	References 224
8	Supercapacitors Based on Graphene and Related Materials 227
	<i>Kothandam Gopalakrishnan, Achutharao Govindaraj, and C. N. R. Rao</i>
8.1	Introduction 227
8.2	Characteristics of Supercapacitors 228
8.3	Activated Carbons 228
8.4	Carbon Nanotubes 231
8.5	Graphene-Based Supercapacitors 233
8.6	Graphene Micro-Supercapacitors 236
8.7	Nitrogen-Doped Graphene 239
8.8	Boron-Doped Graphene 242
8.9	Graphene Pseudocapacitors 243
8.10	Graphene-Conducting Polymer Composites 243

8.11	Graphene-Transition Metal Oxide Composites	247
	References	249
9	Self-Assembly of Graphene for Electrochemical Capacitors	253
	<i>Yiqing Sun and Gaoquan Shi</i>	
9.1	Introduction	253
9.2	The Chemistry of Chemically Modified Graphene	254
9.3	The Self-Assembly of CMGs into 2D Films	255
9.3.1	Vacuum-Filtration-Induced Self-Assembly	256
9.3.2	Evaporation-Induced Self-Assembly	258
9.3.3	Langmuir–Blodgett (LB) Technique	259
9.3.4	Layer-by-Layer (LBL) Assembly	261
9.4	Self-Assembling CMG Sheets into 3D Architectures	263
9.4.1	Template-Free Self-Assembly	264
9.4.1.1	Gelation of CMGs	265
9.4.2	Template Guided Self-Assembly	268
9.4.2.1	Soft Templates	268
9.4.2.2	Hard Templates	268
9.4.3	Ice Segregation Induced Self-Assembly	270
9.5	Self-Assembled Graphene Materials for ECs	271
9.6	Conclusions and Perspectives	274
	References	275
10	Carbon Nanotube-Based Thin Films for Flexible Supercapacitors	279
	<i>Zhiqiang Niu, Lili Liu, Weiya Zhou, Xiaodong Chen, and Sishen Xie</i>	
10.1	Introduction	279
10.2	Solution-Processed CNT Films	281
10.3	Solution-Processed Composite CNT Films	285
10.4	Directly Synthesized SWCNT Films	289
10.5	The Composite Films Based on Directly Synthesized SWCNT Films	293
10.6	Conclusions and Outlook	295
	References	296
11	Graphene and Porous Nanocarbon Materials for Supercapacitor Applications	301
	<i>Yanhong Lu and Yongsheng Chen</i>	
11.1	Introduction	301
11.2	Construction and Classification of Supercapacitors	303
11.2.1	Electrical Double Layer Capacitors (EDLCs)	304
11.2.2	Pseudo-Supercapacitors (PSCs)	306
11.2.3	Asymmetrical Supercapacitors (ASCs)	308
11.2.4	Micro-supercapacitors (MSCs)	309
11.3	A Performance Study of EDLCs Based on Nanocarbon Materials	311

11.3.1	Specific Surface Area	312
11.3.2	Pore Size Distribution	313
11.4	Porous Nanocarbon Materials for Supercapacitors	315
11.4.1	Activated Carbons (ACs)	317
11.4.2	Templated Carbons	318
11.4.3	Carbide-Derived Carbons (CDCs)	320
11.4.4	Graphene-Based Materials	321
	Summary	328
	Acknowledgments	328
	References	328
12	Aligned Carbon Nanotubes and Their Hybrids for Supercapacitors	339
	<i>Hao Sun, Xuemei Sun, Zhibin Yang, and Huisheng Peng</i>	
12.1	Introduction	339
12.2	Synthesis of Aligned CNT Materials	339
12.3	Properties of Aligned CNT Materials	343
12.4	Planar Supercapacitors	344
12.5	Fiber-Shaped Supercapacitors	349
12.6	Summary and Outlook	356
	References	357
13	Theoretic Insights into Porous Carbon-Based Supercapacitors	361
	<i>Nada Mehio, Sheng Dai, Jianzhong Wu, and De-en Jiang</i>	
13.1	Introduction	361
13.2	Classical Density Functional Theory	362
13.3	Ionic Liquid-Based Electric Double-Layer Capacitors	363
13.3.1	Differential Capacitance at the Planar IL/Electrode Interface	365
13.3.2	Interfacial Layering of Ionic Liquids	366
13.3.3	Oscillation of Ionic Liquid EDLC Capacitance with Variations in Pore Size	368
13.4	Organic Electrolyte Based Electric Double-Layer Capacitors	371
13.4.1	Effects of Pore Size on Capacitance for Organic Electrolyte EDLCs	371
13.4.2	Effects of Solvent Polarity on Capacitance	373
13.5	Summary and Outlook	375
	Acknowledgments	376
	References	376
14	Nanocarbon-Based Materials for Asymmetric Supercapacitors	379
	<i>Faxing Wang, Zheng Chang, Minxia Li, and Yuping Wu</i>	
14.1	Introduction	379
14.2	Activated Carbons for ASCs	382
14.2.1	Preparation Methods	382
14.2.2	Electrochemical Performance in Organic Electrolytes	383

14.2.3	Electrochemical Performance in Aqueous Electrolytes	385
14.3	Graphene for ASCs	389
14.3.1	Preparation Methods	389
14.3.2	Electrochemical Performance in Organic Electrolytes	390
14.3.3	Electrochemical Performance in Aqueous Electrolytes	390
14.4	Nanocarbon Composites for ASCs	392
14.4.1	Composites Based on AC	392
14.4.1.1	Preparation Methods	392
14.4.1.2	Electrochemical Performance in Organic Electrolytes	393
14.4.1.3	Electrochemical Performance in Aqueous Electrolytes	393
14.4.2	Composites Based on CNTs	395
14.4.2.1	Preparation Methods	395
14.4.2.2	Electrochemical Performance in Organic Electrolytes	396
14.4.2.3	Electrochemical Performance in Aqueous Electrolytes	398
14.4.3	Composites Based on Graphene	399
14.4.3.1	Preparation Methods	399
14.4.3.2	Electrochemical Performance in Organic Electrolytes	399
14.4.3.3	Electrochemical Performance in Aqueous Electrolytes	401
14.5	Other Carbon Materials and Their Composites for ACSs	403
14.5.1	Preparation Methods	403
14.5.2	Electrochemical Performance in Organic Electrolytes	405
14.5.3	Electrochemical Performance in Aqueous Electrolytes	406
14.6	All Solid State ASCs Based on Nanocarbon Materials	407
14.7	Summary and Prospects	409
	Acknowledgments	410
