Design and Control of Intelligent Robotic Systems

 Springer

Contents

1	Computational Intelligence Techniques in Bio-inspired Robotics	1
	<i>M. Begum, F. Kararay</i>	
1.1	Introduction	1
1.2	Bio-inspired Robotics and Tools of Computational Intelligence: The Historic Synergy	2
1.2.1	Overview	2
1.2.2	The CI Tools Most Commonly Used in Bio-inspired Robotics	3
1.3	Bio-inspired Robotics: An Emerging Research Field	4
1.4	Cognitive Modeling for Autonomous Robots: CI-Based Approaches	7
1.4.1	Cognition: Robot and Human	7
1.4.2	Value System	9
1.4.3	Visual Attention	12
1.4.4	Social Cognition	14
1.5	Conclusion	19
	References	20
2	Swarm Intelligence for Collective Robotic Search	29
	<i>Lisa L. Grant, Ganesh K. Venayagamoorthy</i>	
2.1	Collective Robotic Search	29
2.2	Navigation Strategies	31
2.2.1	Greedy Search - A Conventional Method	31
2.2.2	Particle Swarm Optimization	33
2.2.3	Fuzzy Logic	34
2.3	Single Target Obstacle-Free Environment	38
2.4	Multiple Target/Obstacle Environment	40
2.4.1	Obstacle Avoidance Method	40
2.4.2	Case Study 1: Single Swarm	41
2.4.3	Case Study 2: Multiple Swarms	44

2.5	Conclusion	45
	References	46
3	A Glowworm Swarm Optimization Based Multi-robot System for Signal Source Localization	49
	<i>K.N. Krishnanand, D. Ghose</i>	
3.1	Introduction	49
3.2	Prior Work	51
3.3	The GSO Algorithm	52
3.3.1	GSO Algorithm Description	52
3.3.2	A Simulation Example to Illustrate Basic Working of GSO	54
3.4	Algorithmic Modifications for Robotic Implementation	55
3.4.1	Obstacle Avoidance Model	56
3.4.2	Implementation Models for Leapfrogging Behavior	56
3.5	Kinbots: Multi-robot Platform for Real-Robot-Experiments	57
3.5.1	Relative Localization of Neighbors	59
3.5.2	Luciferin Glow/Reception	60
3.6	Real-Robot-Experiments	60
3.6.1	Experiment 1: Basic GSO Behavior	60
3.6.2	Experiment 2: Leapfrogging Behavior	63
3.6.3	Experiment 3: Localization of a Single Light Source	65
3.7	Concluding Remarks	67
	References	67
4	Evolutionary Robotics: From Simulation-Based Behavior Learning to Direct Teaching in Real Environments	69
	<i>Seiji Yamada, Daisuke Katagami</i>	
4.1	Introduction	69
4.2	Simulation-Based Behavior Learning Using Genetic Algorithm	70
4.2.1	Related Work	71
4.2.2	Task: Action-Based Environment Modeling	72
4.2.3	States, Actions and Environment Vectors	73
4.2.4	Applying GA to Acquire Behaviors	75
4.2.5	Simulation Experiments	78
4.2.6	Discussion	83
4.3	Directly Teaching for Robots in Real Environments	85
4.3.1	Supervised Learning and Interactive Evolutionary Computation	86
4.3.2	Teacher View and Learner View	86
4.3.3	Interactive Classifier System	87
4.3.4	Robot Experiments in the Real World	89
4.3.5	Teaching Efficiency	93
4.4	Conclusion	94
	References	94

5	Ranked Pareto Particle Swarm Optimization for Mobile Robot Motion Planning	97
	<i>D. Wang, N.M. Kwok, D.K. Liu, Q.P. Ha</i>	
5.1	Introduction	97
5.2	Ranked Pareto Particle Swarm Optimization	99
5.2.1	Key Concepts in <i>MOPs</i>	99
5.2.2	Particle Swarm Optimization	100
5.2.3	Ranked Pareto Particle Swarm Optimization	100
5.3	F^2 Method	106
5.3.1	Definition of a Force Field	107
5.3.2	Attractive Force	108
5.3.3	Reaction Force	109
5.3.4	VSF^2 Method	109
5.4	Using <i>RPPSO</i> for Multiobjective Optimization of F^2 Method	111
5.4.1	Case 1: Single Robot and One Obstacle	112
5.4.2	Case 2: Two Robots Navigating in a Corridor	115
5.5	Conclusion	116
	References	117
6	Path Planning Inspired on Emotional Intelligence	119
