# Insulation of High-Voltage Equipment

With 226 Figures

Springer

# Contents

**Preface ..... V**

**Part 1 Requirements on Insulation and Methods of Determining the Electric Strength**

**Chapter 1 Insulating Materials and System Design Selection ..... 3**

    1.1 Operational Conditions and Requirements on Insulation ..... 3

    1.2 Typical Design of Electrophysical Systems Insulation..... 9

**Chapter 2 Insulation and Media Test Techniques ..... 13**

    2.1 Testing Electric Strength ..... 13

    2.2 Lifetime and Treeing Tests ..... 19

**Part 2 Short- and Long-Term Electric Strength of Insulating Materials and Media**

**Chapter 3 Influence of Dielectric Properties, State, and Electrodes on Electric Strength ..... 27**

    3.1 Pressure, Density, and Mechanical Stresses ..... 27

    3.2 Temperature:..... 42

    3.3 Molecular and Supramolecular Structure ..... 60

    3.4 Electrode Material ..... 65

    3.5 State of the Electrode Surface..... 71

**Chapter 4 Influence of Contamination and Structural Defects..... 83**

    4.1 Solid Particles ..... 83

    4.2 Structural Defects and Impurities in Solid Dielectrics..... 93

    4.3 Moisture..... 97

**Chapter 5 Dependence of Electric Strength on the Parameters of Applied Voltage ..... 103**

    5.1 Voltage Duration ..... 103

    5.2 Shape of a Voltage Pulse ..... 113

5.3 Frequency and Periodicity .....	122
5.4 Voltage Polarity .....	132
<b>Chapter 6 Influence of Insulation Gap Geometry on Electric Strength .....</b>	<b>141</b>
6.1 Field Configuration in an Insulation Gap .....	141
6.2 Interelectrode Gap Length .....	150
6.3 Electrode Surface Area .....	156
6.4 Dielectric Volume in an Electric Field .....	164
<b>Chapter 7 Flashover Voltage at the Interface between Two Dielectric Media .....</b>	<b>169</b>
7.1 Orientation and Dimensions of an Insulator in an Electric Field .....	169
7.2 Geometry of the Electrodes and the Character of Their Contact with the Insulator .....	176
7.3 Properties and State of the Insulator Surface and Ambient Medium .....	182
7.4 Parameters of the Applied Voltage .....	191
<b>Chapter 8 Electric Strength of Dielectric Materials in a Hostile Environment .....</b>	<b>195</b>
8.1 Ionizing Radiation .....	195
8.2 Electron and Ion Beams .....	204
8.3 Laser and UV Radiation .....	215
8.4 Magnetic Field .....	227
8.5 Electric Strength of Insulation and Intercontact Medium in Explosive Commutators .....	234
8.6 Electric Strength of Gases and Liquids in a Flow .....	244
8.7 Recovery of Electric Strength after Spark and Arc Discharges .....	251
<b>Chapter 9 Methods for Improving the Dielectric Properties of Electric Insulating Materials and Media .....</b>	<b>265</b>
9.1 Mixing and Injection of Additives and Fillers .....	265
9.2 Radiation Modification .....	283
9.3 Conditioning of the Electrodes and Dielectric Medium .....	292
9.4 Orientational Extension of Polymers .....	302
9.5 Unconventional Insulation .....	304
 <b>Part 3 Insulation Design</b>	
<b>Chapter 10 Methods for Increasing the Working Field Strength of Insulation .....</b>	<b>311</b>
10.1 Electric Field Control .....	311
10.2 Electrode Coating .....	335
10.3 Combination Insulating Materials .....	340

<b>Chapter 11 Calculation of Insulation .....</b>	<b>351</b>
11.1 Calculations of Short-Term Electric Strength (Static and Voltage– Time Characteristics) .....	351
11.2 Statistical Characteristics of the Electric Strength and Coordination of Insulation .....	372
11.3 Calculation of Insulation Reliability and Operating Lifetime.....	378
11.4 Choice of the Working Field Strength.....	385
<b>References .....</b>	<b>393</b>
Additional References .....	410
I Vacuum Insulation.....	410
II Gas Insulation.....	411
III Liquid Insulation .....	413
IV Solid Insulation.....	414
V Composite Insulation.....	418
VI General Problems of Insulation Design.....	420
