

# Contents

<b>Introduction</b>	<b>9</b>
<b>1 First Definitions and Results</b>	<b>11</b>
1.1 Boolean Formulas and Assignments . . . . .	11
1.2 Conjunctive Normal Form and CSP . . . . .	16
1.3 Tseitin Encoding and Series-Parallel Graphs . . . . .	20
1.4 Examples for Encoding into a <i>SAT</i> Problem . . . . .	25
1.5 Autark Assignments . . . . .	28
1.6 Craig Interpolants . . . . .	29
1.7 Satisfiability by Combinatorics . . . . .	31
<b>2 Resolution Calculus</b>	<b>37</b>
2.1 Calculi and NP versus co-NP . . . . .	37
2.2 Refutation Completeness . . . . .	38
2.3 Unit Clauses, Subsumption and Pure Literals . . . . .	44
2.4 Strategies and Restrictions . . . . .	46
2.5 Exponential Lower Bounds for the Length of Resolution Proofs . . . . .	52
<b>3 Special Cases Solvable in Polynomial Time</b>	<b>61</b>
3.1 2-CNF . . . . .	62
3.2 Horn Formulas . . . . .	65
3.3 Renamable Horn Formulas . . . . .	67
3.4 Schaefer Classification . . . . .	69
<b>4 Backtracking and DPLL Algorithms</b>	<b>71</b>
4.1 DPLL and Heuristic Functions . . . . .	73
4.2 Monien-Speckenmeyer Algorithm . . . . .	75
4.3 Paturi-Pudlák-Zane Algorithm . . . . .	78
4.4 DPLL in Practice . . . . .	81
4.4.1 Clause Learning . . . . .	82
4.4.2 Non-Chronological Backtracking . . . . .	84
<b>5 Local Search and Hamming Balls</b>	<b>85</b>
5.1 Deterministic Local Search . . . . .	86
5.2 Random Initial Assignments . . . . .	88
5.3 Covering Codes . . . . .	90

5.4	A Random Walk Algorithm . . . . .	93
5.5	Moser-Scheder-Algorithm . . . . .	98
5.6	GSAT, WalkSAT, Novelty, ProbSAT . . . . .	101
5.7	Hard Formulas for Local Search . . . . .	104
<b>6</b>	<b>More SAT Algorithms</b>	<b>109</b>
6.1	A Divide and Conquer Algorithm . . . . .	109
6.2	Stålmarck Algorithm . . . . .	111
6.3	SAT Algorithms with OBDD's . . . . .	115
6.4	Randomized Rounding and the Cross-Entropy Method . . . . .	117
<b>7</b>	<b>Random Clauses and Physical Approaches</b>	<b>121</b>
7.1	Threshold and Phase Transition . . . . .	121
7.2	Random Satisfiable Formulas . . . . .	125
7.3	Ising Model and Physically Motivated Algorithms . . . . .	128
<b>8</b>	<b>Heavy Tail Distributions and Restarts</b>	<b>133</b>
<b>9</b>	<b>Final Discussion</b>	<b>137</b>
<b>Appendix:</b>	Programming in Pseudo Code . . . . .	141
<b>Appendix:</b>	Graphs . . . . .	143
<b>Appendix:</b>	Asymptotic Notation and Recurrences . . . . .	145
<b>Appendix:</b>	Efficient Algorithms, P and NP . . . . .	147
<b>Appendix:</b>	Probabilistic Algorithms and the Class RP . . . . .	151
<b>Appendix:</b>	Boolean Circuits . . . . .	153
<b>Appendix:</b>	SAT is NP-complete . . . . .	156
<b>Appendix:</b>	Binary Decision Diagrams (BDD's) . . . . .	159
<b>Appendix:</b>	Random Variables . . . . .	162
<b>Appendix:</b>	Markov Chains . . . . .	166
<b>Appendix:</b>	Estimations with Binomial Coefficients . . . . .	168
<b>Bibliography</b>		<b>171</b>
<b>Index</b>		<b>180</b>
