Contents

1 Lower Limb Prosthesis 1
1.1 A Need for Better Functionality of Lower Limb Prostheses 1
1.2 Normalization of Prosthetic Gait Parameters as a Way for Increasing the Prosthesis' Functionality 4
1.2.1 Biomechanics and Prosthetics 4
1.2.2 Anthropomorphicity of Lower Limb Prostheses 7
1.2.3 Influence of Moment in Prosthetic Ankle Joint on the User's Comfort 12
1.2.4 Influence of a Moment in Prosthetic Ankle Joint on the Existing Knee Joint of the Involved Leg 18
1.2.5 Measurements of the Pressures on the Residuum from the Socket 20
1.3 Structure of Study Design for Development of Lower Limb Prosthesis 24
References 25

2 Biomechanical Investigations of Sound and Prosthetic Gait 29
2.1 Kinematic and Dynamic Analysis of Motion 29
2.2 Modeling the Human Body for Motion Analysis 32
2.3 Equipment for Motion Analysis 32
2.4 Architecture of Computerized Gait Analysis 34
2.5 Interpretation of Gait Analysis Results 36
References 37

3 Theory of Ballistic Gait in Prosthetics 39
3.1 Ballistic Synergy in Normal Gait 39
3.1.1 Generation of the Propulsive "Push-Off" 40
3.1.2 Regular and Intentional Push-Off 41
3.1.3 Computer Simulation of Regular and Intentional Gait 44
3.1.4 "Angle–Moment" Dependency in Ankle During Normal Gait 47
3.1.5 Contribution of the Knee to Ballistic Synergy 48
3.1.6 Implications for Prosthetics 52

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

3.2 Active and Passive Moments in Joints 52
3.3 Model of a One-Step Cycle: Passive Phase 53
3.3.1 Phase "A" of a Step Cycle 54
3.3.2 Phase "M" of a Step Cycle 55
3.3.3 Working Model Simulation of the Balancing 56
3.4 A Model of a One-Step Cycle 58
3.4.1 Active Phase "$MAHA_2$" 58
3.5 Generation of Propulsion in Norm and Disruption of Ballistic Synergy in Prosthetic Gait 60
3.6 Modeling of One-Leg Standing 64
3.7 Implication for Prosthetic Design 66
References 67

4 Theory of Designing the Anthropomorphic Lower Limb Prostheses 71
4.1 Synthesis of a Mechanism for Prosthetic Joint 71
4.1.1 Anatomical Prototype for Modeling a Moment 71
4.1.2 Trochoidal Model of the Spring Function of the Anatomical Foot 72
4.1.3 Synthesis of a Mechanism for Prosthetic Ankle 79
4.2 Development and Testing of the Rolling Joint Foot and Ankle 84
4.2.1 Development of the Rolling Joint Foot and Ankle 84
4.2.2 Mechanics Tests of the Rolling Joint Foot and Ankle 87
4.3 Development and Evaluation of the Rolling Joint Knee 93
4.3.1 Design Approach 93
4.3.2 RJ Knee Mechanism 95
4.3.3 Mechanical Testing of the Rolling Joint Knee Unit 97
4.3.4 Moment of Resistance to Knee Flexion 98
4.3.5 Moment of Resistance to the Knee Adduction/Abduction 99
4.3.6 Mechanical Tests of RJ Knee: Conclusion 100
References 100

5 Biomechanical Evaluation of Experimental Prostheses 103
5.1 Purpose of Biomechanical Evaluation 103
5.2 Biomechanical Testing of RJFA 104
5.2.1 Knee Performance 104
5.2.2 Forces and Pressures on Residuum 105
5.2.3 Moment of Dorsiflexion 108
5.2.4 Biomechanical Testing of RJFA with Adjustable Stiffness 109
5.2.5 Biomechanical Testing of RJFA: Conclusion 113
5.3 Biomechanical Testing of the Rolling Joint Leg 113
5.3.1 Symmetry of Distant-Time Characteristics Between Involved and Uninvolved Sides 115
5.3.2 Moment of Resistance to Knee Flexion–Extension Moment 115
5.3.3 Forces and Pressures on Residuum and Their Link with Ankle Moment 117

5.3.4 Contribution of the RJ Knee vs. RJ Foot 118
5.3.5 Biomechanical Testing of Rolling Joint Knee: Conclusion 119
5.4 Long-Term Outcomes of Rehabilitation with RJFA 119
References 121

6 Principle of Spectral Reciprocity in Biomechanics of Locomotion 123
6.1 Tuning Out of Resonance in Biomechanics of Locomotion 123
6.2 When Resonance is Unwanted 123
6.3 Model of Spectral Optimization 124
6.4 Implication for Prosthetics and Orthotics 127
References 128

7 Biomechanical Aspects of Direct Skeletal Attachment of Lower Limb Prostheses 131
7.1 Methodology of Direct Skeletal Attachment 131
7.2 The Challenge of Longevity for Direct Skeletal Attachment 131
7.2.1 Longevity of Skin–Implant Seal 132
7.2.2 Longevity of the Bone–Implant Bond 133
7.3. Recommendations for Implant's Design 136
7.4. Recommendations for Prosthesis's Design 137
7.5 Biomechanical Aspects of DSA: Conclusions 137
Conclusion 137
