

## Contents

<b>Preface</b>	<i>XI</i>
<b>Prologue I: Synergetic Agents: Classical</b>	<i>XIII</i>
<b>Prologue II: Synergetic Agents: Quantum</b>	<i>XXIX</i>
<b>Color Plates</b>	<i>XLV</i>
<b>Part One Classical Synergetic Agents</b>	<i>1</i>
<b>1 Introduction: In Search for General Principles</b>	<i>3</i>
1.1 Physics: the Laser Paradigm – Self-Organization in Nonequilibrium Phase Transitions	<i>4</i>
1.2 Biology: Movement Coordination	<i>7</i>
1.3 Computer Science: Synergetic Computer as Neural Model	<i>9</i>
1.3.1 Synaptic Strengths are Fixed by the Synergetic Computer via $\nu_k$	<i>10</i>
1.3.2 $\nu_k$ Learned by the Synergetic Computer	<i>11</i>
1.3.3 Learning of Synaptic Strengths	<i>12</i>
1.4 Synergetics Second Foundation	<i>13</i>
1.4.1 A Reminder of Jaynes' Principle	<i>13</i>
1.4.2 Application of the Maximum Information (Entropy) Principle to Nonequilibrium Systems and in Particular to Nonequilibrium Phase Transitions	<i>15</i>
1.5 Concluding Remarks	<i>19</i>
References	<i>20</i>
<b>2 Multirobot Action</b>	<i>23</i>
2.1 Multirobot Systems and the Free Energy Principle: A Reminder of Chapter 1	<i>23</i>
2.2 Action Principle for a Multirobot System	<i>26</i>
2.3 Generation of Order Parameter Fields	<i>27</i>
2.3.1 Opaqueness	<i>28</i>

2.3.2	Limited Sensory and/or Computer Power	28
2.4	Expected Final State of Total System	28
2.5	Determination of Absolute Position	29
2.6	How Can Robots Use the Information Provided by the Order Parameter Field?	30
2.6.1	No Objects in Plane ("Free Robots")	30
2.6.2	A Concave Object in Plane	30
2.6.3	Finite Boundaries	30
2.6.4	Collective Motion through an Array of Obstacles in a Preferred Direction	31
2.6.5	More Complicated Robot–Robot Interactions	31
2.6.6	Formation of Letters?	31
2.7	What have the Order Parameters $\xi$ (Laser) and $V$ (Robots) in Common?	32
2.8	Is the Multirobot Potential $V(x)$ an Order Parameter? A Critical Discussion	34
2.9	Information Field and Order Parameter Field	35
2.10	Robots Minimize their Information: Haken–Levi Principle	36
2.10.1	Non-Newtonian Dynamics	40
2.10.2	The Nature of Fluctuations	42
2.11	Information in Case of Several Modes of Action	43
2.12	Probability Distributions and Slaving Principle	43
2.13	Role of Information in Lévy Flights	45
2.13.1	Search for Objects	45
2.13.2	LFG Model in Two Dimensions	47
2.14	Equations of Motion in the Field of a Superposition of Harmonic Potentials	48
2.14.1	Selection of Potentials	48
2.14.2	Calculations of the Restriction of Motion Parameters	51
2.14.2.1	General Derivation of Motion Restrictions	51
2.14.2.2	Special Derivation of Restrictions of Motion	53
2.14.3	Equations of Motion	55
2.14.3.1	Complete Equations	55
2.14.3.2	Overdamped Motion in 2D	62
2.15	Calculation of Restrictions from Local Information of Motion	64
2.15.1	Solution of the Fokker–Planck Equation for a Harmonic Potential	65
2.15.2	Stationary Solution of Fokker–Planck Equation	65
2.16	System Information: Expectation Value of Local Information of Individual Agents	69
2.17	Docking of Robot at Object or Other Robot in Two Dimensions: Two Versions of a Case Study	76
2.17.1	The Geometry	76
2.17.2	Dynamics of Center of Gravity	78
2.17.2.1	Approach 1	78
2.17.2.2	Approach 2	79

2.17.3	Collision Avoidance: Circumvention of Obstacle	80
2.17.4	Langevin and Fokker–Planck Equations: Information	80
2.18	Docking of Robot at Object or Other Robot in Two Dimensions. Center of Gravity Motion. Approach 3. Survey	82
2.18.1	Requirements on the Sensors	86
2.19	Dynamics of Center of Gravity. Approach 3. Equations of Motion	86
2.20	Docking at an Object or Other Robot in Two Dimensions	90
2.20.1	Orientation	90
2.21	Docking of Robot in Three Dimensions I	92
2.21.1	General approach	92
2.22	Docking of Robot in Three Dimensions II: Equations of Motion, Measurement of Position, and Determination of Desired Fixed Point	93
2.23	Overview: Total Equations of Motion in Three Dimensions based on Local Information	99
2.23.1	Equation of Motion of the Centers of Gravity	100
2.23.2	Equation of Rotational Motion of the Approaching Process	101
2.23.3	Complete Information of the Approaching Maneuver of Two Robots	102
2.23.4	Equations of Motion of Center of Gravity to a Defined Docking Position	102
2.23.5	Equation of Rotational Motion During the Alignment Process	105
2.23.6	Complete Information of the Alignment Maneuver	105
	References	106
<b>3</b>	<b>Multirobot Action II: Extended Configurations</b>	<b>107</b>
3.1	Formation of Two-Dimensional Sheets	107
3.2	Pattern Recognition: Associative Memory	108
3.3	Pattern Recognition and Learning (Optical Arrangement)	108
3.3.1	Other Recognition Tasks	110
3.4	Formation of Buildings	110
3.5	Macroscopic Locomotion and Movement	111
	References	113
<b>Part Two</b>	<b>Quantum Synergetic Agents</b>	<b>115</b>
	Introduction: Molecular Robotics and Quantum Field Theory	115
<b>4</b>	<b>Quantum Theory of Robotic Motion and Chemical Interactions</b>	<b>119</b>
4.1	Coherent Action and Synchronization: the Laser Paradigm	119
4.2	Discussion	123
4.2.1	Coherent States	123
4.2.2	Some General Remarks on Our Methodology	125
4.3	Representations	125
4.3.1	Schrödinger Representation	126
4.3.2	Heisenberg Representation	127

4.3.3	Interaction Representation	127
4.4	Molecules: The Nanolevel	128
4.5	Molecular Dynamics	132
4.6	The Explicit Form of the Heisenberg Equations of Motion: A “Menu”	137
4.7	The Complete Heisenberg Equations for the Coupling between a Fermi Field and a Bose Field, Including Damping, Pumping, and Fluctuating Forces	140
4.8	The Explicit Form of the Correlation Functions of Quantum Mechanical Langevin Forces	142
4.9	Heisenberg Equations of Motion for $\psi(x)$	146
4.10	Solution to the Heisenberg Equation for Operator Wave Functions: Wave Packets	148
4.11	Many-Particle Systems in Quantum Field Theory I: Noninteracting Particles	152
4.12	Many-Particle Systems in Quantum Field Theory II: Interacting Particles	153
	References	154
<b>5</b>	<b>Applications to Molecular Processes</b>	<b>157</b>
5.1	Dynamics of the Transformation of a Molecule <i>A</i> into a Molecule <i>B</i>	157
5.2	Correlation Function for the Incoherent Parts	159
5.3	Dynamics of the Transformation of a Molecule <i>A</i> Into a Molecule <i>B</i> : the Initial State is a Coherent State	163
5.4	Dynamics of the Transformation of a Molecule <i>A</i> into a Molecule <i>B</i> : Coherent Driving	165
5.5	The Method of Adiabatic Elimination	167
5.6	Adiabatic Elimination: a Refined Treatment	168
5.7	Parametric Molecular Processes	172
5.8	Parametric Oscillator	176
<b>6</b>	<b>Molecular Transport along One-Dimensional Periodic Structures</b>	<b>181</b>
6.1	A Short Overview	181
6.1.1	Transport in One-Dimensional Periodic Structures	181
6.1.1.1	Examples of Such Structures	181
6.1.1.2	Examples of Transported Objects	181
6.1.1.3	Kinds of Transport	182
6.1.1.4	The Basic Question	182
6.1.1.5	Microtubuli and Actin Filaments	183
6.1.1.6	Motor Proteins: Kinesin and Dynein	183
6.1.1.7	Actin Filaments	183
6.1.2	Basic Equations of Passive Molecular Transport: Noise-Free Solution	184
6.1.3	The Impact of Quantum Fluctuations	188

6.1.4	Several Molecules	190
6.2	Production and Transport of Molecules	191
6.3	Signal Transmission by Molecules	196
	References	199
<b>7</b>	<b>A Topic in Quantum Biology</b>	<b>201</b>
7.1	Contraction of Skeleton Muscles	201
7.1.1	Structure and Function of the Skeleton Muscle of Vertebrates	201
7.1.2	Interaction between Myosin and Actin	202
7.2	Details of the Movement Cycle	203
7.3	The Model and Its Basic Equations	203
7.4	Solution to Equations 7.7–7.15	206
7.4.1	The First Step	207
7.4.2	The Second Step	209
7.5	The Steps (3) and (4)	210
7.6	Discussion of Sections 7.4–7.5	211
7.7	The Skeleton Muscle: a Reliable System Composed of Unreliable Elements	212
7.8	Detailed Derivation of (7.75)	216
	References	217
<b>8</b>	<b>Quantum Information</b>	<b>219</b>
8.1	Introduction	219
8.2	The Maximum Information Principle	220
8.3	Order Parameters and Enslaved Modes	224
8.4	Haken–Levi Principle I: Quantum Mechanical	225
8.5	Haken–Levi Principle II: Quantum Mechanical	227
	Reference	232
<b>9</b>	<b>Molecular Robots</b>	<b>233</b>
9.1	Construction Principles: The Basic Material	233
9.2	Mobile DNA Molecules	235
9.2.1	Step by Step: Glueing Together and Cleaving	235
9.3	Goal (Road Map of the Following Chapter)	240
9.4	Quantum Field Theory of Motion of a Molecular Robot: a Model	240
9.4.1	A Molecule Moves on an “Energy-Rich” Substrate	240
9.4.1.1	Molecular Quantum System	240
9.4.1.2	Substrate (s)	240
9.4.1.3	Interaction $r$ - $s$	241
9.4.1.4	Considered Scenario	241
9.4.1.5	Labeling the Quantum States	242
9.4.1.6	Labeling the States of Processes	243
9.4.2	General Site $l$ , Transitions, Hamiltonians	244
9.4.3	Two Types of Solution	246
9.4.3.1	“Grass Fire” Solution	246

9.4.3.2	“Running Waves” Solution	256
9.4.4	Generalizations	263
9.4.4.1	Collective Motion of Several Robot Molecules: Equations of Motion	263
9.4.4.2	Synchronization of Motion	264
9.4.4.3	Derivation of Basic Equations of Coherent Motion	265
9.4.4.4	Bipedal Walking	267
9.5	The Question of Molecular Quantum Waves	270
	References	271

**Appendix: The Meaning of Expectation Values and Correlation Functions of Bose and Fermi Operators 273**

**List of Symbols 277**

**Index 281**
