| Preface | v |
| 1 Introduction | 1 |
| 2 Basic concepts of the linear theory of elasticity | 6 |
| 2.1 Stresses | 6 |
| 2.2 Linear strains | 13 |
| 2.3 Constitutive relations | 19 |
| 2.4 Boundary value problems | 26 |
| 2.4.1 Static statements | 26 |
| 2.4.2 Dynamic problems | 30 |
| 2.5 Simplified models | 31 |
| 2.5.1 Elastic rods and strings | 31 |
| 2.5.2 Beam models | 35 |
| 2.5.3 Membranes | 38 |
| 2.5.4 Plane stress and strain states | 40 |
| 3 Conventional variational principles | 43 |
| 3.1 Classical variational approaches | 43 |
| 3.1.1 Energy relations | 43 |
| 3.1.2 Direct principles | 44 |
| 3.1.3 Complementary principles | 47 |
| 3.2 Variational principles in dynamics | 49 |
| 3.3 Generalized variational principles | 55 |
| 3.3.1 Relations among variational principles | 55 |
| 3.3.2 Semi-inverse approach | 60 |
| 3.4 Finite dimensional discretization | 61 |
| 3.4.1 Ritz method | 62 |
| 3.4.2 Galerkin method | 64 |
| 3.4.3 Finite element method | 66 |
| 3.4.4 Boundary element method | 72 |

| | |
|---|-----|
| 4 The method of integrodifferential relations | 73 |
| 4.1 Basic ideas | 73 |
| 4.1.1 Analytical solutions in linear elasticity | 73 |
| 4.1.2 Integral formulation of Hooke's law | 78 |
| 4.2 Family of quadratic functionals | 81 |
| 4.3 Ritz method in the MIDR | 83 |
| 4.3.1 Algorithm of polynomial approximations | 83 |
| 4.3.2 2D clamped plate – static case | 85 |
| 4.4 2D natural vibrations | 90 |
| 4.4.1 Eigenvalue problem | 90 |
| 4.4.2 Free vibrations of circular and elliptic membranes | 93 |
| 5 Variational properties of the integrodifferential statements | 101 |
| 5.1 Variational principles for quadratic functionals | 101 |
| 5.2 Relations with the conventional principles | 103 |
| 5.3 Bilateral energy estimates | 106 |
| 5.4 Body on an elastic foundation | 114 |
| 5.4.1 Variational principle for the energy error functional | 114 |
| 5.4.2 Bilateral estimates | 118 |
| 6 Advance finite element technique | 124 |
| 6.1 Piecewise polynomial approximations | 124 |
| 6.2 Smooth polynomial splines | 127 |
| 6.2.1 Argyris triangle | 127 |
| 6.2.2 Stiffness matrix for the Argyris triangle | 132 |
| 6.2.3 C^2 approximations for a triangle element | 133 |
| 6.3 Finite element technique in linear elasticity problems | 136 |
| 6.4 Mesh adaptation and mesh refinement | 145 |
| 7 Semi-discretization and variational technique | 158 |
| 7.1 Reduction of PDE system to ODEs | 158 |
| 7.1.1 Beam-oriented notation | 158 |
| 7.1.2 Semi-discretization in the displacements | 160 |
| 7.1.3 Semi-discretization in the stresses | 162 |
| 7.2 Analysis of beam stress-strain state | 166 |
| 7.3 2D elastic beam vibrations | 170 |

| | |
|---|-----|
| 8 An asymptotic approach | 177 |
| 8.1 Classical variational approach | 177 |
| 8.2 Integrodifferential approach | 182 |
| 8.2.1 Basic ideas of asymptotic approximations | 182 |
| 8.2.2 Beam equations – general case of loading | 187 |
| 8.3 Elastic beam vibrations | 190 |
| 8.3.1 Statement of an eigenvalue problem | 190 |
| 8.3.2 Longitudinal vibrations | 194 |
| 8.3.3 Lateral vibrations | 199 |
| 8.4 3D static problem | 204 |
| 9 A projection approach | 218 |
| 9.1 Projection formulation of linear elasticity problems | 218 |
| 9.2 Projections vs. variations and asymptotics | 222 |
| 10 3D static beam modeling | 227 |
| 10.1 Projection algorithms | 227 |
| 10.2 Cantilever beam with the triangular cross section | 241 |
| 10.3 Projection beam model | 246 |
| 10.4 Characteristics of a beam with the triangular cross section | 248 |
| 11 3D beam vibrations | 252 |
| 11.1 Integral projections in eigenvalue problems | 252 |
| 11.2 Natural vibrations of a beam with the triangular cross section | 255 |
| 11.3 Forced vibrations of a beam with the triangular cross section | 266 |
| A Vectors and tensors | 269 |
| B Sobolev spaces | 271 |
| Bibliography | 274 |
| Index | 278 |
