Preface xi

List of figures xiii

List of tables xxiii

List of abbreviations and acronyms xxv

1 The Sun and the solar wind 1
1.1 General points concerning the Sun 1
1.2 The solar atmosphere 3
1.3 Electromagnetic radiation from the Sun 4
1.4 Planck's radiation law 6
1.5 The greenhouse effect 10
1.6 Radiowave emissions from the Sun 14
1.7 Sunspots and the solar cycle 18
1.8 Electromagnetic radiation from a disturbed Sun 28
1.9 Particle emissions from the Sun 33
1.10 Fluid flow in a nozzle 35
1.11 The solar wind equation 37
1.12 The "frozen-in" field concept 40
1.13 The garden hose effect 43
1.14 Exercises 48

2 The atmosphere of the Earth 51
2.1 Nomenclature 51
2.2 Temperature structure of the atmosphere 53
2.3 Atmospheric drag on satellites 59
2.4 The atmosphere as an ideal gas 63
2.5 The exosphere 67
2.6 Height-dependent temperature 68

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.7 The adiabatic lapse rate 69
2.8 Diffusion 71
2.9 The equation of motion of the neutral gas 75
2.10 Geostrophic and thermal winds 78
2.11 The wind systems of the upper atmosphere. 79
2.12 Observations of the neutral wind 81
2.13 Collisions between particles 84
2.14 Collisions in gases with different temperatures. 85
2.15 Drag effects 88
2.16 Thermospheric neutral winds 90
2.17 E-region winds 97
2.18 Observations of E-region neutral winds 97
2.19 Vertical motion. 101
2.20 Exercises 114

3 The Earth's magnetic field and magnetosphere 117
3.1 An historical introduction 117
3.2 Description of the Earth's magnetic field 118
3.3 Mathematical representation of the Earth's magnetic system . . . 125
3.4 Secular variations in the Earth's magnetic field 128
3.5 Tracing magnetic field lines 136
3.6 E-field mapping along conducting magnetic field lines. 139
3.7 The source of the magnetic field of the Earth 142
3.8 The unipolar inductor 145
3.9 The magnetic field away from the Earth 147
3.10 The magnetic tail 158
3.11 Magnetic field merging 161
3.12 Effects of the magnetic force 166
3.13 Energy flux into the magnetosphere 168
3.14 Some aspects of the energy balance. 170
3.15 Magnetic field convection 176
3.16 High-latitude convection patterns and field-aligned currents 181
3.17 Exercises 188

4 The ionosphere 189
4.1 The production of ionization by solar radiation. 189
4.2 The ionization profile of the upper atmosphere 196
4.3 Ionization profiles 203
4.4 The recombination process 208
4.5 The O^+ dominant ionosphere 210
4.6 Ambipolar diffusion 215
4.7 Multicomponent topside ionosphere 217
4.8 Diffusion in the presence of a magnetic field. 219
4.9 E-layer ionization and recombination 221
4.10 Time constant of the recombination process 225
4.11 D-region ionization and recombination 228

4.12 The plasmasphere 235
4.13 Ferraro's theorem and a unipolar inductor 236
4.14 Magnetospheric convection close to the Earth 239
4.15 The equatorial fountain effect 242
4.16 Exercises 243

5 Currents in the ionosphere 247
5.1 The steady-state approach 247
5.2 Dependence of ion velocity direction on altitude 252
5.3 Current density in the ionosphere 254
5.4 Height-dependent currents and heating rates 257
5.5 Heating due to collisions 263
5.6 Heating of an oscillating electric field 267
5.7 Currents due to gravity and diffusion 272
5.8 Exercises 273

6 Magnetic fluctuations in response to height-integrated currents 275
6.1 Height-integrated currents and conductance 275
6.2 Magnetic field fluctuations from auroral currents 277
6.3 Equivalent current systems 286
6.4 Equivalent currents at different latitudes 292
6.5 The S_q current system 296
6.6 Mapping of E-fields in the ionosphere 304
6.7 Polarization fields around an auroral arc 309
6.8 Currents related to an auroral arc 313
6.9 Exercises 315

7 The aurora 317
7.1 An historical introduction 317
7.2 The height of the aurora 320
7.3 The occurrence frequency of the aurora 322
7.4 Global distribution of the aurora 325
7.5 The auroral appearance 330
7.6 Auroral particles 332
7.7 Precipitation patterns of auroral particles 341
7.8 Energy deposition profiles of auroral particles 342
7.9 Deriving energy spectra from electron density profiles 349
7.10 Excitation processes in the aurora 353
7.11 The quenching process 361
7.12 The proton aurora 363
7.13 Exercises 368
