iPS Cell Technology and Disease Research: Issues To Be Resolved	1
Rudolf Jaenisch	
Therapeutic Somatic Cell Reprogramming by Nuclear Transfer	9
Stan Wang and John B. Gurdon	
Induction of Neural Lineages from Mesoderm and Endoderm by Defined Transcription Factors	17
Marius Wernig	
Proposing a Model for Studying Primate Development Using Induced Pluripotent Stem Cells	31
Maria C.N. Marchetto, Alysson R. Muotri, and Fred H. Gage	
HTT Evolution and Brain Development	41
Chiara Zuccato and Elena Cattaneo	
Human Pluripotent and Multipotent Stem Cells as Tools for Modeling Neurodegeneration	57
Jerome Mertens, Philipp Koch, and Oliver Brüstle	
Human Stem Cell Approaches to Understanding and Treating Alzheimer’s Disease	67
Lawrence S.B. Goldstein	
Potential of Stem Cell-Derived Motor Neurons for Modeling Amyotrophic Lateral Sclerosis (ALS)	75
Derek H. Oakley, Gist F. Croft, Hynek Wichterle, and Christopher E. Henderson	

Using Pluripotent Stem Cells to Decipher Mechanisms and Identify Treatments for Diseases That Affect the Brain 93
Marc Peschanski and Cécile Martinat

Modeling Autism Spectrum Disorders Using Human Neurons 101
Alysson Renato Muotri

On the Search for Reliable Human Aging Models: Understanding Aging by Nuclear Reprogramming 119
Ignacio Sancho-Martinez, Emmanuel Nivet,
and Juan Carlos Izpisua Belmonte
