

Contents

1	Introduction	1
2	Absorption and Emission of Light	5
2.1	Cavity Modes	6
2.2	Thermal Radiation and Planck's Law	9
2.3	Absorption, Induced, and Spontaneous Emission	12
2.4	Basic Photometric Quantities	16
2.4.1	Definitions	16
2.4.2	Illumination of Extended Areas	19
2.5	Polarization of Light	21
2.6	Absorption and Dispersion	25
2.6.1	Classical Model	26
2.7	Absorption and Emission Spectra	30
2.7.1	Absorption Cross Section and Einstein Coefficients	31
2.7.2	Fluorescence Spectra	33
2.7.3	Oscillator Strength	34
2.7.4	Relation Between Absorption Cross Section and Einstein Coefficients	36
2.7.5	Integrated Absorption and Line Strength	36
2.8	Transition Probabilities	38
2.8.1	Lifetimes, Spontaneous and Radiationless Transitions	38
2.8.2	Semiclassical Description: Basic Equations	41
2.8.3	Weak-Field Approximation	44
2.8.4	Transition Probabilities with Broad-Band Excitation	46
2.8.5	Phenomenological Inclusion of Decay Phenomena	48
2.8.6	Interaction with Strong Fields	49
2.8.7	Relations Between Transition Probabilities, Absorption Coefficient, and Line Strength	53
2.9	Coherence Properties of Radiation Fields	55
2.9.1	Temporal Coherence	56
2.9.2	Spatial Coherence	57

2.9.3	Coherence Volume	59
2.9.4	The Coherence Function and the Degree of Coherence . . .	62
2.10	Coherence of Atomic Systems	67
2.10.1	Density Matrix	67
2.10.2	Coherent Excitation	68
2.10.3	Relaxation of Coherently Excited Systems	70
2.11	Problems	72
3	Widths and Profiles of Spectral Lines	75
3.1	Natural Linewidth	76
3.1.1	Lorentzian Line Profile of the Emitted Radiation	77
3.1.2	Relation Between Linewidth and Lifetime	79
3.1.3	Natural Linewidth of Absorbing Transitions	80
3.2	Doppler Width	82
3.3	Collisional Broadening of Spectral Lines	87
3.3.1	Phenomenological Description	88
3.3.2	Relations Between Interaction Potential, Line Broadening, and Shifts	93
3.3.3	Collisional Narrowing of Lines	96
3.4	Transit-Time Broadening	97
3.5	Homogeneous and Inhomogeneous Line Broadening	101
3.6	Saturation and Power Broadening	102
3.6.1	Saturation of Level Population by Optical Pumping	103
3.6.2	Saturation Broadening of Homogeneous Line Profiles . . .	105
3.6.3	Power Broadening	106
3.7	Spectral Line Profiles in Liquids and Solids	107
3.8	Problems	110
4	Spectroscopic Instrumentation	113
4.1	Spectrographs and Monochromators	114
4.1.1	Basic Properties	115
4.1.2	Prism Spectrometer	126
4.1.3	Grating Spectrometer	130
4.2	Interferometers	139
4.2.1	Basic Concepts	139
4.2.2	Michelson Interferometer	141
4.2.3	Fourier Spectroscopy	144
4.2.4	Mach–Zehnder Interferometer	146
4.2.5	Sagnac Interferometer	150
4.2.6	Multiple-Beam Interference	151
4.2.7	Plane Fabry–Perot Interferometer	160
4.2.8	Confocal Fabry–Perot Interferometer	169
4.2.9	Multilayer Dielectric Coatings	174
4.2.10	Interference Filters	179
4.2.11	Birefringent Interferometer	182

4.2.12 Tunable Interferometers	187
4.3 Comparison Between Spectrometers and Interferometers	188
4.3.1 Spectral Resolving Power	188
4.3.2 Light-Gathering Power	191
4.4 Accurate Wavelength Measurements	192
4.4.1 Precision and Accuracy of Wavelength Measurements	193
4.4.2 Today's Wavemeters	195
4.5 Detection of Light	206
4.5.1 Thermal Detectors	209
4.5.2 Photodiodes	217
4.5.3 Photodiode Arrays	227
4.5.4 Charge-Coupled Devices (CCDs)	229
4.5.5 Photoemissive Detectors	231
4.5.6 Detection Techniques and Electronic Equipment	244
4.6 Conclusions	253
4.7 Problems	254
5 Lasers as Spectroscopic Light Sources	257
5.1 Fundamentals of Lasers	257
5.1.1 Basic Elements of a Laser	257
5.1.2 Threshold Condition	258
5.1.3 Rate Equations	261
5.2 Laser Resonators	263
5.2.1 Open Optical Resonators	264
5.2.2 Spatial Field Distributions in Open Resonators	267
5.2.3 Confocal Resonators	270
5.2.4 General Spherical Resonators	273
5.2.5 Diffraction Losses of Open Resonators	274
5.2.6 Stable and Unstable Resonators	276
5.2.7 Ring Resonators	281
5.2.8 Frequency Spectrum of Passive Resonators	283
5.3 Spectral Characteristics of Laser Emission	286
5.3.1 Active Resonators and Laser Modes	286
5.3.2 Gain Saturation	289
5.3.3 Spatial Hole Burning	291
5.3.4 Multimode Lasers and Gain Competition	293
5.3.5 Mode Pulling	297
5.4 Experimental Realization of Single-Mode Lasers	298
5.4.1 Line Selection	298
5.4.2 Suppression of Transverse Modes	303
5.4.3 Selection of Single Longitudinal Modes	304
5.4.4 Intensity Stabilization	312
5.4.5 Wavelength Stabilization	314
5.5 Controlled Wavelength Tuning of Single-Mode Lasers	326
5.5.1 Continuous Tuning Techniques	326

- 5.5.2 Wavelength Calibration 331
 - 5.5.3 Frequency Offset Locking 334
 - 5.6 Linewidths of Single-Mode Lasers 335
 - 5.7 Tunable Lasers 338
 - 5.7.1 Basic Concepts 339
 - 5.7.2 Semiconductor-Diode Lasers 340
 - 5.7.3 Tunable Solid-State Lasers 347
 - 5.7.4 Color-Center Lasers 350
 - 5.7.5 Dye Lasers 353
 - 5.7.6 Excimer Lasers 371
 - 5.7.7 Free-Electron Lasers 374
 - 5.7.8 X-Ray Lasers 378
