Foreword	vii
Endorsement by the International Combined Orthopaedic Research Societies (I-CORS) Member Organizations	viii
Preface	x
Acknowledgments	xi
Contributors	xii
1 Why Do We Need Experimental Research?	1
1 Evidence-Based Research	2 3
2 Establishing a Basic Research Facility in Orthopedic Surgery	9 4
2 Structural Biomechanics	31
5 Physiological Boundary Conditions for Mechanical Testing	10 32
6 Static, Dynamic, and Fatigue Mechanical Testing	11 42
7 Use of Human and Animal Specimens in Biomechanical Testing	12 49
8 Whole Bone Biomechanics	13 55
9 Biomechanics of Trabecular and Cortical Bone	14 64
3 Functional Biomechanics	109
15 Musculokeletal Dynamics	110 17
16 Measurement Techniques	117 18
4 Numerical Biomechanics	135
19 Inverse Dynamics	136 22
20 Principles of Finite Elements Analysis ...	145 23
21 Validation of Finite Element Models	156 24
Good Laboratory Practice and Quality Control	17
How to Prepare for a Period in Research ..	25
Biomechanics of Fracture Fixation	71
Biomechanical Assessment of Fracture Repair	77
Biomechanics of Cartilage	84
Biomechanics of Joints	92
Spine Biomechanics	102
Clinical Assessment of Function	122
Functional Biomechanics with Cadaver Specimens	127
Computational Biomechanics of Bone ...	167
Numerical Simulation of Implants and Prosthetic Devices	175
Numerical Simulation of Fracture Healing and Bone Remodelling	181

5	Imaging		191
25	Micro-Computed Tomography Imaging of Bone Tissue	192	30 Histochemistry Bone and Cartilage 233
26	Imaging Bone	204	31 Immunohistochemistry 238
27	Ultrasound Techniques for Imaging Bone	209	32 Molecular Imaging In Situ Hybridization .. 245
28	In Vivo Scanning	218	33 Laser Scanning Confocal Microscopy and Laser Microdissection 255
29	Imaging of Cartilage Function	225	34 Image Analysis Histomorphometry Stereology 261
6	Cellular Studies		269
35	Cell Culture Research	270	37 Fluid Flow and Strain in Bone 291
36	Cartilage Explants and Organ Culture Models	282	38 Biomechanics of Bone Cells 300
7	Molecular Techniques in Bone Repair		309
39	Molecular Testing	310	40 Genetically Modified Models for Bone Repair 320
8	In Vivo Models		325
41	General Considerations for an In Vivo Model	326	44 In Vivo Models for Bone and Joint Infections 343
42	Animal Models for Bone Healing	332	45 In Vivo Models for Articular Cartilage Repair 350
43	Models for Impaired Healing	339	46 In Vivo Soft Tissue Models 356
9	Tissue Engineering		367
47	Scaffolds for Tissue Engineering and Materials for Repair	368	49 Stem Cells for Musculoskeletal Repair ... 383
48	Use of Growth Factors in Musculoskeletal Research	375	50 Biological Evaluation and Testing of Medical Devices 395
10	Statistics for Experimental Research		413
51	Study Design	414	53 Nonparametric versus Parametric Tests 420
52	Power and Sample Size Calculation	416	54 How to Limit Bias in Experimental Research 430
	Index		436
