I	Introduction	1
1	Introduction	3
1.1	Motivation	3
1.2	Applications for nitride HEMTs	4
1.3	Objective of this work	5
II	Reliability studies of GaN High Electron Mobility Transistors	7
2	Basic physical/HEMT properties	9
2.1	Basic properties of III-nitrides and heterostructures	9
2.1.1	Polarization of nitrides	9
2.1.2	AlGaIn/GaN-heterostructures	12
2.2	Fundamental HEMT device physics	14
2.3	Reliability of GaN HEMT Devices	18
2.4	Defect states in GaN HEMTs	21
2.5	Basic methods for HEMT evaluation	27
2.5.1	Fundamental properties of defects in semiconductors	27
2.5.2	Transient Current Spectroscopy (TCS)	29
2.5.3	Fast transient spectroscopy	33
2.5.4	Quasi static CV-measurements	34
2.6	Basics of the fabrication technology	39
2.7	HEMTs for RF-applications	41
3	Investigation of electric field effects on reliability	43
3.1	Verification of the degradation	45
3.1.1	Characteristics of the degradation	46
3.1.2	Recoverability of the degradation	51
3.2	Investigation of the driving mechanism	52
3.2.1	Inverse piezoelectric effect	52
3.2.2	Punch through oxide	59
3.3	Optimization of the HEMT structure to avoid degradation	70
3.3.1	Discussion of epitaxial parameters	70
3.3.2	Adjustment of device dimensions	71

3.3.3	Adjustment of field plate dimensions	73
3.3.4	Summary of the findings on the electric field induced degradation	77
4	Investigation of traps and their effects on reliability	79
4.1	Location, influence and effect of traps in GaN HEMTs	80
4.1.1	Location of traps in GaN HEMTs	80
4.1.2	Influence of traps in GaN HEMTs	81
4.1.3	Description of the two level degradation model	82
4.1.4	Examples for the two degradation regions	85
4.2	Characterization of traps in AlGaIn/GaN HEMTs	91
4.2.1	Characterization of traps with fast transient spectroscopy	91
4.2.2	Principle of TCS	93
4.2.3	Investigation of defect levels with TCS	99
4.3	Impact of traps in stress test	111
4.3.1	Impact of pre-induced (trapped) carriers in a stress test	111
4.3.2	Influence of preexisting traps	112
4.3.3	Lower band gap states	119
4.4	Conclusions from the on-wafer stress tests	124
5	Conclusions and Outlook	127
	Bibliography	131
6	Acknowledgements	159
7	Personal Publication List	161
