Contents

Simulating Cities: A Software Engineering Perspective ................................. 1
  Cristina V. Lopes

Regular Programming for Quantitative Properties of Data Streams ............ 15
  Rajeev Alur, Dana Fisman, and Mukund Raghothaman

Formalizing Single-Assignment Program Verification:
  An Adaptation-Complete Approach ............................................................. 41
  Cláudio Belo Lourenço, Maria João Frade, and Jorge Sousa Pinto

Practical Optional Types for Clojure ............................................................. 68
  Ambrose Bonnaire-Sergeant, Rowan Davies, and Sam Tobin-Hochstadt

A Timed Process Algebra for Wireless Networks with an Application
  in Routing: (Extended Abstract) ................................................................. 95
  Emile Bres, Rob van Glabbeek, and Peter Höfner

Computing with Semirings and Weak Rig Groupoids .................................. 123
  Jacques Carette and Amr Sabry

On Hierarchical Communication Topologies in the π-calculus. .................... 149

Modular Termination Verification for Non-blocking Concurrency ................. 176
  Pedro da Rocha Pinto, Thomas Dinsdale-Young, Philippa Gardner,
  and Julian Sutherland

Call-By-Push-Value from a Linear Logic Point of View .............................. 202
  Thomas Ehrhard

Visible Type Application .............................................................................. 229
  Richard A. Eisenberg, Stephanie Weirich, and Hamidhasan G. Ahmed

Automatically Splitting a Two-Stage Lambda Calculus ............................... 255
  Nicolas Feltman, Carlo Angiuli, Umut A. Acar, and Kayvon Fatahalian

Probabilistic NetKAT ................................................................................... 282
  Nate Foster, Dexter Kozen, Konstantinos Mamouras, Mark Reitblatt,
  and Alexandra Silva

Coordinated Concurrent Programming in SYNDICATE ................................. 310
  Tony Garnock-Jones and Matthias Felleisen
An Application of Computable Distributions to the Semantics of Probabilistic Programming Languages .............................................................. 337
  Daniel Huang and Greg Morrisett

Weakest Precondition Reasoning for Expected Run–Times of Probabilistic Programs ..................................................................................................................... 364
  Benjamin Lucien Kaminski, Joost-Pieter Katoen, Christoph Matheja, and Federico Olmedo

Improving Floating-Point Numbers: A Lazy Approach to Adaptive Accuracy Refinement for Numerical Computations ......................................................... 390
  Hideyuki Kawabata and Hideya Iwasaki

Needle & Knot: Binder Boilerplate Tied Up ......................................................... 419
  Steven Keuchel, Stephanie Weirich, and Tom Schrijvers

On the Relative Expressiveness of Higher-Order Session Processes .................. 446
  Dimitrios Kouzapas, Jorge A. Pérez, and Nobuko Yoshida

A Classical Realizability Model for a Semantical Value Restriction .................. 476
  Rodolphe Lepigre

Probabilistic Functions and Cryptographic Oracles in Higher Order Logic .......... 503
  Andreas Lochbihler

Extensible and Efficient Automation Through Reflective Tactics ...................... 532
  Gregory Malecha and Jesper Bengtson

An Algorithm Inspired by Constraint Solvers to Infer Inductive Invariants in Numeric Programs ................................................................. 560
  Antoine Miné, Jason Breck, and Thomas Reps

Functional Big-Step Semantics ........................................................................... 589
  Scott Owens, Magnus O. Myreen, Ramana Kumar, and Yong Kiam Tan

Classical By-Need .................................................................................................. 616
  Pierre-Marie Pédrot and Alexis Saurin

Macrofication: Refactoring by Reverse Macro Expansion .................................... 644
  Christopher Schuster, Tim Disney, and Cormac Flanagan

Type Error Diagnosis for Embedded DSLs by Two-Stage Specialized Type Rules ................................................................. 672
  Alejandro Serrano and Jurriaan Hage

Actor Services: Modular Verification of Message Passing Programs ................... 699
  Alexander J. Summers and Peter Müller
